

TITLE of the INVENTION

"Selection of the decoding size of a multiresolution image"

TEXT of the ABSTRACT

This method of displaying a digital image for creating a multimedia content, the image being coded in multiple resolutions, comprises steps consisting of:

- determining the number of resolutions present in the coded image,
- obtaining (E230) the data of the sub-images associated with each of the previously determined resolutions, and
- displaying (E300) all the sub-images.
